

Sizing Options (in.)		
Nominal Pipe Size (A)	Length (B)	Custom (B)
2	17.50	
3	26.00	
4	33.50	
6	49.75	

PVC static mixers designed to mix two liquids from separate low pressure streams into a homogenous liquid. Input will generally be from a Y-Joint and output to a single pipe/flow.

Clear tubing allows for observation of flow to ensure thorough mixing and monitoring of particle buildup. A removable retaining ring allows for the removal of the mixing element for easy cleaning and maintenance.

Custom diameter tubes can be used or standard diameter with custom lengths. Designs for both are available upon request.
